

Anmol Kumar Jha

Aspiring AI/ML Engineer with a strong foundation in full-stack development and real-time web applications. Focused on building intelligent, scalable systems by combining modern web technologies with AI and machine learning.

EDUCATION

Indian Institute of Information Technology, Vadodara <i>B.Tech in Computer Science and Engineering</i>	2024 – 2028 <i>CGPA: 8.18 / 10.0</i>
D.Y. Patil International School, Bihar <i>Senior Secondary Education (Science)</i>	2021 – 2023 <i>Score: 87.2%</i>

TECHNICAL SKILLS

Programming Languages: C, C++, Python, JavaScript (ES6+)
Full Stack Development: React.js, Tailwind CSS, Node.js, Express.js, REST APIs, WebSockets, Socket.IO, MongoDB, MySQL
AI / ML: NumPy, Pandas, Matplotlib, Seaborn, TensorFlow, OpenCV, Prompt Engineering, RAG, LangChain, LangGraph
Tools & Deployment: Git, GitHub, Postman, Netlify, Vercel, Render, Flask, Next.js, Ollama
Coursework: DBMS, OOPs, Operating Systems, Data Structures & Algorithms, Digital Logic Design

EXPERIENCE

Nav Astitva – Skill Development Center <i>Full Stack Web Developer Intern</i>	Dec 2025 – May 2026 <i>Bihar, India (Remote)</i>
- Designed and developed key sections of the NGO's official website and an E-certificate distribution system for the skill development center using React.js, Node.js, Express.js, and MongoDB. - Implemented responsive UI and backend logic for dynamic content rendering and seamless user interactions. - Managed and coordinated social media handles to enhance the organization's digital presence.	

PROJECTS

TRUTHLENS <i>Multi-Modal Disinformation Detection Platform</i> Python, Next.js, XceptionNet, Ollama
- Implemented local LLM pipeline with Qwen3:8B for automated claim extraction, clickbait pattern detection, and contextual credibility scoring – eliminating external API inference costs. - Integrated Tavily-powered live web corroboration against 2000+ trusted news sources and generated structured credibility score-cards with ad detection, source bias analysis, and PDF report export. - Fine-tuned an XceptionNet model on a deepfake dataset achieving 82% accuracy for image and video manipulation detection; applied GradCAM to generate spatial heatmaps highlighting tampered regions for transparent, explainable predictions. - Built a misinformation propagation graph using reverse image search to trace how manipulated media spreads across sources over time, mapping reach and narrative mutation to expose coordinated disinformation campaigns.
SKETCHAA <i>Real-Time Multiplayer Drawing Game</i> React.js, Socket.IO, Node.js, Ollama
- Developed a real-time collaborative drawing platform using React, Socket.IO, and the HTML5 Canvas API with low-latency synchronized canvas updates, live chat, room management, and dynamic leaderboards. - Integrated Ollama with the Qwen2.5-VL vision-language model for AI-powered drawing recognition and automated sketch evaluation with real-time score calculation. - Engineered a scalable multi-room game server with Node.js supporting concurrent sessions, player turn management, configurable round timers, and persistent session state via Socket.IO event architecture.
TRAFF-IQ <i>Intelligent Traffic Management System</i> Python, YOLOv8, OpenCV, Flask
- Developed an AI-driven adaptive traffic control system using YOLOv8 and OpenCV for real-time vehicle detection, density estimation, and dynamic signal timing with 85% accuracy. - Implemented emergency vehicle detection with 90% accuracy enabling priority-based signal clearance, and red-light violation detection at 85% accuracy using computer vision. - Built a full-stack data pipeline with Flask, Node.js, and Socket.IO to broadcast real-time analytics to a live dashboard, integrated with Arduino hardware for on-ground signal actuation.

ACHIEVEMENTS

- **Winner** at Intellify 4.0 National Hackathon.
- **Finalist** at 2 national-level hackathons: Hackatron @ IIIT Gwalior and Odoo Hackathon 2026.
- 3 Star @ CodeChef.
- Pupil @ Codeforces.
- 550+ problems solved across all platforms.
- JEE Main Percentile: **98.4**.
